## **Dynamics of Flight regulations**

- 1. Student attendance at lectures is recommended and can be monitored.
- 2. Student receives the final grade based on the result of the exam.
- 3. The student may be exempted from the examination by obtaining positive marks (at least 3.0) from two tests carried out during the semester. During each test the student can get the grade: 2.0, 3.0, 3.5, 4.0, 4.5 or 5.0.
- 4. During the tests it is not allowed to use materials not previously approved by the lecturer.
- 5. The student may participate in all terms of the exam and the final grade is based on his last attempt.
- 6. If the student obtained two positive grades from tests, the final grade is calculated as a weighted average of 60% for the first and 40% for the second test. The thresholds for individual final grades are set as follows:
  - above 4,75 grade 5,0
  - ➢ above 4,25 − grade 4,5
  - above 3,75 grade 4,0
  - ➤ above 3,25 grade 3,5
  - Two tests passed grade 3,0
  - Two tests not passed grade 2,0
- 7. If a student has been exempted from the exam and has participated in one of the exam terms, the last grade that he obtained is his final valid.
- If a student has been writing his test or exam not independently or used unauthorized materials, student receives a grade of 2.0 from a given date and loses the opportunity to take further exam dates
- 9. A student who interferes with classes is at risk of being asked to leave the class.
- 10. A student who interferes with conducting a test or exam is at risk of being removed from the colloquium or exam. In this case, the student receives a grade of 2.0 and may lose the opportunity to take the next exam dates.
- 11. Subjects matters not covered by these regulations are decided by the Dynamics of Flight lecture coordinator or the head of the Mechanics division.
