Warsaw University of Technology

Faculty of Power and Aeronautical Engineering

CATALOGUE OF COURSES

Graduate studies (M.Sc. degree)
TOK 2013

Warsaw 2013

FIELDS OF STUDIES AND SPECIALIZATIONS

The graduate studies last 3 semesters and conclude with the Master of Science degree. They are offered in two specializations. Please see the table below:

Field of Studies	Specialization
Aerospace Engineering	Aerospace Engineering
Power Engineering	Power Engineering
	Nuclear Power engineering

The program of M.Sc. studies is the same for all specializations during the first two semesters. The studies within a particular specialization can be launched when a sufficient number of students have been admitted by the Dean of the Faculty.

Heads of specializations:
- Aerospace Engineering – prof. Zdobysław Goraj
- Power Engineering – prof. Tadeusz Skoczkowski
- Nuclear Power engineering – dr Nikołaj Uzunow

Regulations of Studies

Students must comply with the „Regulations of Studies of Warsaw University of Technology" accepted by the University Senate. Please see the following sections for more details.

Dean of the Faculty decides in matters not specified by the Regulations.

Course of studies

From the second semester students must design an individual study plan for next semesters, which includes the obligatory courses, especially the specialization courses that must be repeated, and possibly the courses included in the program for higher semesters of studies.

When designing the individual study plan for the next semester, students must decide on:
- Electives - if included in the programme. There is no separate list of electives. An elective can be any course which is not included in the programme of other fields of studies given in English. Dean of the Faculty approves optional electives, e.g. lectured by the Visiting Professors.

- Division and subject of intermediate projects.
- Division and scope of diploma seminar. The seminar provides knowledge and skills required in diploma project preparation.
- Division and subject of diploma project. The division is the same as in case of diploma seminar.

Students can also select from a range of foreign language or physical education courses.

Individual study plan for the next semester must be prepared according to the prerequisites given in the catalogue, i.e. courses which must be completed before the beginning of the current course.

After each semester, the student performance is assessed and the registration procedure for the next semester is performed. At the end of the study program all the requirements for graduation must be fulfilled.

Registration procedures for each semester

ECTS Credit System

During each course a certain number of ECTS points are earned in accordance with the course significance, difficulty and the student workload required. The total number of credit points that can be earned for all courses in each semester is 30.

Evaluation System

1. At the end of each semester, students obtain one final grade for each course (regardless of the course division into lectures, tutorials and laboratory work).

2. The grading scale starts with a failing grade 2 and consists of five passing grades: 3, $3^{1/2}$, 4, $4^{1/2}$, 5.

3. In exceptional cases, students may obtain "condition" N final grade, which means that the student performance during the semester is evaluated positively, but the student is not allowed to take the final exam (due to valid reasons). The lecturer defines the procedures in case of "condition" N. This grade obliges the student to complete the course by the end of the following semester the latest, so that he does not need to repeat it and pay extra fee. If the student fails to complete the course during the following semester, the course must be repeated. Consequently, the student is obliged to cover the costs of the course repetition according to University Regulations. There are no credit points for "condition" N.

Requirements for registration for each semester
1. In order to register for the next semester, students are required to have a sufficient number of credit points as given in the table below.

M. Sc. Programme		
Registration for semester	II	III
Number of collected credits	16	48

2. Students who fail to collect the required number of points are removed from the study programme, with the exception of the last two semesters of studies, for which the student can re-register.

3. Students must repeat the failed course during the next available semester.
Courses can be repeated twice. Students who fail to complete the course three times will be removed from the Faculty. Students are obliged to cover the costs of course repetition according to University Regulations.

4. Dean can approve student sick leave or leave of absence. First year students may obtain sick leave only.

5. In some cases, the Dean can grant a student who is on the leave, the right to take certain courses "in advance".

6. Duration of graduate studies must not be longer than five semesters. In case the student is granted the leave, duration of studies is prolonged accordingly.

7. Surplus credit points accumulated during B.Sc. studies are not transferred to M.Sc. studies. The M.Sc. studies always begin with zero credit points.

Requirements for graduation

Requirements for graduating with the M.Sc. degree are as follows:

- Completion of all courses in the M.Sc. study program,

- For Aerospace Engineering 4-week internship in industry (recommended)

- Collecting 90 ECTS points including the preparation of M.Sc. thesis

- Writing M.Sc. thesis and passing the final exam.

The final grade for the completed study program is an average of grades received for each course. Failing grades are not included in the average.

$$Average\ grade = \frac{\sum_{i \in Z} g_i \cdot O_i}{\sum_{i \in Z} g_i}$$

Z – number of completed courses,

g_i – number of ECTS points allocated to the course,

O_i – grade for the course.

Final examinations are held four times a year – in January, March, June and October.

Brief study schedule

Brief study schedule includes information on the course title and the number of hours per semester and week. Information about a course division into lectures, tutorials, laboratory work and projects as well as the number of credit points can be found in a table for each semester.

Complete information about courses can be found in the last part of the catalogue on courses contents.

LEGEND for the list of courses (following pages)

In the following section the list of courses is given, divided into suggested sequence during standard semesters of study.

In each semester the standard set of courses gives 30 ECTS points. In the case the required (named and specified) courses do not fill standard 30 ECTS points – then ELECTIVE courses should be taken in the amount summing the semester load to 30 ECTS. Compare remarks on elective courses in the section "Course of Studies".

In the headers of tables the following abbreviations/acronyms are used:

Lc – **Lecture**

T – **Tutorial**

Lb – **Laboratory**

P – **Project**

S – **Seminar**

Date 19.02.2013

1. Methods of measurement of heat fluxes and temperature visualisation (infra-red thermography, liquid crystals thermography, thermocolours).
2. Thermal contact resistance.
3. Heat transfer in turbulent and two-phase flows.
4. Heat transfer with phase change (solidification, frost formation, icing).
5. Heat transfer in porous media and suspensions.
6. Thermal insulations and protection against high and low temperatures.
7. Heat exchangers and heat pipes.
8. Radiation in transparent and semitransparent media.

Tutorials:

1. Examples of calculation of temperature distribution and heat transfer during turbulent flows.
2. Examples of calculations of temperature distribution and heat transfer during two-phase fluid flows.
3. Examples of calculations of temperature distribution and heat transferand during fluid flow in porous media.
2. Application of effectiveness and NTU methods in heat exchangers.
3. Examples of calculation of radiative heat transfer in transparent and semitransparent media.

Prerequisits:

Heat Transfer 1 (ML.ANK423) , RES - Solar Engineering 1 (ML.ANS516) , Thermodynamics 1 (ML.ANW116)

Contents - short:

Teaching evaluation of renewable energy. Evaluation of implementation possibilities for renewable energy, evaluation of environmental threats related to energy storage and conversion processes, feasibility of individual technologies of renewable energy storage. Presenting new and future renewable energy technologies.

Bibliography:

Materials for students placed on website
1. IEA: World Energy Outlook, OECD/IEA, 2006
2. Duffie J.A., Beckman W.A.: Solar Engineering of Thermal Processes, John Willey&Sons, 2006

Course results:

After passing the subject student will be able to analyze renewable energy resources and needs for storage systems. Understand relation between the renewable and fossil and nuclear energy conversion systems, understand the limits for renewables.

Grading criteria:

60% multiple-choice test carried out at the end of the lectures, 40% homework grade.
Own work:

Date 19.02.2013

Homework done in teams of 2-3. Subject and form of work (paper, calculations) determined at the beginning of a semester.

Detailed contents:

Basic terms related to energy conversion processes. World's energy resources (fossil fuel and nuclear) versus renewable energy sources. The basic parameters for energy storage. Energy conversion efficiency for selected processes and devices. Possibility of energy storage. Renewable sources; sun as an energy source, conversion of solar radiation energy (collectors and photovoltaic systems). Solar systems for heating and hot water production. Biomass and biofuels – in energy and transportation sector. Solar power plants. Solar energy for heating and hot water generation. Wind energy and wind power generation. Energy of waters and oceans (tidal and wave energy conversion), OTEC. Geothermy – geothermal systems, prospective hot dry rock technologies. Heat pump. Geothermy in Poland. Hydrogen as an energy carrier, hydrogen production by renewables. Examples of renewable energy conversion systems for heat and power generation. Place for renewable in world energy scenario. Prospective power generation technologies using the renewables. Typical solutions of waste utilisation used in power engineering. Rationalization of energy consumption, increase of energy conversion efficiencies. Renewables energy sources versus environment protection.

Additional remarks (by course staff):

Lecture based on Power Point presentations

Contents - short:

The course aims at introducing students basic concepts of business law. Firstly students are familiarized with basic concepts of jurisprudence, introduction to constitutional law, sources of Polish and European business law. The course covers basic concepts of civil and commercial law, including property law, contracts, intellectual property law partnerships and companies. The last part of course concerns administrative aspects of conducting business activities including: registration in the National Court Register or in the Economic Activity Records; different forms of restrictions: concessions, regulated activities and permissions and finally basic concepts of labour law, competition law and tax law.

Bibliography:

1. M. Możdzeń-Marcikowski, Introduction to Polish Administrative Law, C.H. Beck, Warsaw 2009;
2. J. Jabłońska-Błońca, Introduction to Law, LexisNexis, Warsaw 2008;
3. R. Lewandowski, Polish Commercial Law: An Introduction, C.H. Beck 2007.

Course results:

After completing his course the students will be able to understand and prepare basic contracts. He will distinguish between different forms partnerships and companies. He will be able to set up a business and find basic information about business units in the National Court Register. He will have basic notions about different forms of job contracts and taxation.

Grading criteria:

Multiple choice test

SYLLABUS

Course name:	**Computational Fluid Dynamics**
Course name in other language:	**Metody Obliczeniowe Mechaniki Płynów**
Short name:	**CFD**
Course number:	**ML.ANK348**
Course language:	**English**
Responsible for the course:	**prof. dr hab. inż. Jacek Rokicki**

ECTS:	**3**	Number of hours:	[Lc, T, Lb, P, S]
Course level:	**basic**	weekly:	[**2,** 0, **1,** 0, 0]
Form of grading:	**Exam**	by semester:	[**30,** 0, **15,** 0, 0]

Field of Study:	Field of Specialization:	Study level:	Recommended semester:
Energetyka	**Nuclear Power Engineering**	**graduate studies, full time**	**1**
	Power Engineering	**graduate studies, full time**	**1**
	Power engineering	**graduate studies, full time**	**1**
Lotnictwo i Kosmonautyka	**Aerospace Engineering**	**undergraduate, full time**	**7**
Mechanika i Budowa Maszyn	**Computer Aided Engineering**	**undergraduate, full time**	**6**

Contents - short:

Knowledge about methods and tools of computational fluid dynamics

Bibliography:

1. Hirsch, Charles, Numerical computation of internal and external flows, 2007
2. Versteeg, Henk Kaarle, An introduction to computational fluid dynamics, 2007

Grading criteria:

2 tests on theoretical part, work and progress of each student are evaluated in the framework of the point system, individual semester project

Detailed contents:

Basic models in fluid mechanics. Conservative versus non-conservative formulation. Basic discretisation methods for model equations (boundary and initial conditions, stability, CFL condition, Godunov barier). General algorithms for nonlinear problems (pseudo-time iterations, frozen coefficients, quasi-linearisation). Simulation of incompressible flows (stream-function vorticity formulation, projection method and artificial compressibility). Finite volume method for compressible flows. Flux-vector splitting technique. Modelling of shock-waves. Basic information on spectral methods.

Date 19.02.2013

Course results:

Understanding of objectives, advantages and barriers of implementation of energy efficiency policy in industry.

Being familiar with general methods of improving energy efficiency in industry.

Ability to understand and be able to select proper energy measure to be applied in industry.

Being familiar with fundamentals of standard energy management systems.

Understanding methodology and practical methods of measurement and verification of energy savings in industry.

Ability to assess economic advantages of typical energy efficiency measures and investments.

Ability to assess uncertainty of measurements and verification of energy savings.

Grading criteria:

Tests in lectures+final assessment.

Detailed contents:

1.Energy efficiency basic. Basic Concepts Related to Energy Efficiency. Fundamental Definitions. Energy efficiency measures. Role of Energy Efficiency in Economy and Environment Protection. Statistics of energy efficiency. Benefits of Energy Efficiency. Barriers to Energy Efficiency. Legal. Institutional. Financial. Technological. Energy Prices. Diversity of Stakeholders. Potential of Energy Efficiency. Technical. Economic. Market

2. Energy efficiency policy in EU. Energy Efficiency in EU Sustainable Energy Policy. Energy Efficient Scenarios. Strategic EU documents: Green Paper on Energy Efficiency. Energy Efficiency Action Plan. Climate Change Program. EU directives on energy efficiency e.g. CHP Directive, Building Performance Directive, Eco Design Directive, Emission Trading Directive, Energy Services Directive, Home Appliances Directives, Taxation of Energy Products Directive, Gas Directive, Electricity Directive. Energy Efficiency in Emission Trading Scheme. BAT on Energy Efficiency. Exemplary Role of the Public Sector. Energy Efficiency and Renewable Energy Sources. Involvement of the Energy Sector. Perspective in the EU.

3. Energy efficiency law in Poland. Energy Law. Energy Efficiency Law. Secondary legislation. Thermomodernisation Law. National Energy Efficiency Action Plan (NEEAP).

4. Energy efficiency measures. Obligatory and voluntary approach. Long Term Agreements. Role of Companies and Sector Chambers. Energy Services. White Certificate System. Outsourcing. International Standardization and Harmonization. Minimal Energy Efficiency Regulations. Energy Management Systems. Standard EN 16001. Relations Between Different Certificates Schemes. Green Procurement. Energy Fund. Carbon Fund. Energy Conduction Codes: Energy Star, Motor Challenge, Green Buildings, Climate Change Commitments, Green Light. Public Campaigns. Benchmarking. Information and Labeling. Integrated Resource Planning. Definitions. Projections of the End-Use Energy Demand. Fundamentals of Electric Power Planning. Least-Cost Planning Criteria. Electricity Production Costs. Smart metering. Intermittent Renewable Sources. Demand Side Management. Load Curve. Baseline. Energy Pricing. Electricity Tariffs and Energy Efficiency Program Costs. DSM Cost Effectiveness. Case Study. Supply and Demand Sides Integration. Electricity Production Costs. Supply System Integration. Supply Resources Screening. Dispatch Strategies. Supply-Side Loss Reduction. Intermittent RES. Combining DSM and Supply Resources Options. Ranking the Resources Options by Marginal Costs.

5. Energy audits. Methodology for energy auditing. Choosing the Calculation Level. Collecting Data. Unitary Gross Annual Energy Savings. Total Gross Annual Energy Savings. Total ESD Annual Energy Savings. Total ESD Annual Energy Savings for Lifetime. Savings Measurements and Verification. International Performance of Measurements and Verification Protocol. Requirements for Energy Audits and Energy Auditors. Accreditation and Certification Schemes for Energy Auditors. Energy Manager

Electric Power Systems (ML.ANK381)

Contents - short:

To understand world's and EU energy resources, supply and demands.

To understand the ongoing changes in global energy markets, including EU internal energy market.

To gain general knowledge on energy policy of the EU and Poland.

To understand the transformation to sustainable energy systems.

To learn the modern concept of energy security.

To understand fundamentals of electricity reform and competition in electricity markets.

To get familiar with main trends in energy research and promotion.

To gain in-depth knowledge on energy law in Poland.

To understand legal regulations concerning environmental impact of energy sector.

To understand legal status of distributed generation.

Bibliography:

1. Jaccard M.: Sustainable Fossil Fuels, Cambridge University Press, 2005.
2. Kleinpeter M.: Energy planning and policy, John Wiley & Sons, 1995.
3. Toward sustainable energy future, OECD/IEA, 2001, http://www.oecd.org/bookshop
4. World Energy Outlook, International Energy Agency, Paris.
Further Readings:
Selected readings from OECD/IEA and Energy Charter Secretariat websites (provided by lecturer).

Course results:

Understanding of the process of globalisation in the world's energy market.

To get familiar with objectives of the energy policy of the European Commission.

Date 19.02.2013

Ability to understand business processes in energy market and market law regulations.
Ability to understand the EU energy law and environmental law influencing energy processes.
Ability to understand Polish energy law and main decrees related.
Ability to understand main research trends in the EU.
Ability to recognise benefits, driving forces and barriers to distributed generation.

Grading criteria:

Tests in lectures+final assessment.

Detailed contents:

1. Energy general. Role of Energy. World's Energy Resources. World's Energy Forecasts. Energy Trends in the EU. EU Energy Priorities. EU Targets for 2020 and Beyond. EU Internal Energy Market. EU External Energy Relations. Energy Policy in Selected Countries (USA, China, India, Russia, Brazil). Global Energy Investments. Nuclear Option. Development of RES Energy. Role of Energy Efficiency. Climate Change Impact. International Energy Agency. Global strategic petroleum reserves. Energy Charter Treaty. International Atomic Energy Agency.

2. Sustainable energy policy. Sustainable Development Concept. Definition of Sustainable Energy Policy. Clean Energy. Sustainable Energy Systems Attributes: Energy Efficiency. RES Penetration. Climate Impact. Low Carbon Technology Drive. Costs of Energy Technologies. Fossil Fuels in Sustainable Systems.

3. Security of supply. Definition of Security of Supply. Energy Dependence of EU. Security of Supply in Electricity and Gas Markets. Investment Decisions. Policy Tools: Capacity Mechanism and Price Cap. Green Paper on Security Of Supply. Trends in IES Countries. Collective Energy Security. Generation: Investments. Reserves and Fuel Mix in Liberalized Markets. Role of Prices and Market Structure. Role of Governments. Transmission: Current Investments Needs. Transmission Congestion. Cross-Border Interconnections. Planning. Development and Ownership. End-Use Efficiency. Case Studies.

4. Electricity reform and competition in electricity markets. Background To Electricity Reform. Electricity Directive2003/54/EC. Stranded Costs. Unbundling. Electricity Markets: Spot Markets. Power Exchange. Pool. Capacity Mechanism. Financial Markets. Networks: Network Regulations. Managing Congestion. Setting Price Levels. Regulation. Institutional Frameworks. Operators in Investments. Institutions and Policy Framework. Impact of Electricity Market Liberalization on Generation Costs: Market Liberalization. Transparency of Public Policy Objectives and Costs. Allocation of Risk. Investment Costs. Operation and Maintenance Costs. Investments in Power Generating Capacity. Investments Under Competition. Investment in Energy Sector. Latest EU Legislative Proposals.

5. Energy research and promotion. Energy in EU Framework Programs. SET-Plan. Intelligent Energy Europe Program.

6. Energy law in Poland. Energy Sector in Poland. Energy Policy of Poland. Energy Law. Objectives. Scope. Built-In Mechanisms. Main Provisions. Duties of the Energy Sector. End-User Position. Penalties. Role of the President of the Regulatory Office. Feed-in Tariff. Green Certificates. Red Certificates. Weaknesses. Main Decrees to Energy Law. Tariff Decree. Connection Decree. Energy Efficiency Law. Objectives. Main Provisions. White Certificates. Energy Efficiency Financing. NEEAP. Development of Nuclear Law. Competition Law.

7. Environmental impact of energy sector. Energy Related Environmental Directives: IPPC, LCP. Environmental Accounting GHG Emission Reduction. EMAS. ISO 1400. EN 16001. Best Available Techniques. Environmental Protection Law. Climate Change. Importance of Climate Change. Kyoto Protocol And Post-Kyoto. Kyoto Experience. UNFCCC. Climate Change EU Action Plan. Climate Change and Carbon Trading Mechanism. Carbon Trading Mechanisms and Complementary Measures. Flexible

ECTS:	**2**	Number of hours:	[Lc, T, Lb, P, S]
Course level:	**basic**	weekly:	[**1, 1,** 0, 0, 0]
Form of grading:	**Exam**	by semester:	[**15, 15,** 0, 0, 0]

Field of Study:	Field of Specialization:	Study level:	Recommended semester:
Energetyka	**Nuclear Power Engineering**	**graduate studies, full time**	**1**
	Power Engineering	**graduate studies, full time**	**1**
	Power engineering	**graduate studies, full time**	**1**

Contents - short:

Analysis of energy losses, based on the combination of the First and Second Laws of Thermodynamics, when applied to various thermodynamic processes occurring in heat machines. Fundamental concepts and theory of mass transfer phenomena and concurrent heat and mass transfer processes, their occurrence in nature and applications in technology.

Bibliography:

1. Y.A. Cengel and M.A. Boles,"Thermodynamics, An Engineering Approach", Sixth Edition, Mc Graw Hill, Boston, 2008.
2. Y.A. Cegel, "Heat and Mass Transfer: A Practical Approach", Third Edition, Mc Graw Hill, Singapore, 2006.
3. F.P. Incropera, and D.P. DeWitt, "Fundamentals of Heat and Mass Transfer", John Wiley & Sons, Inc., 1998.
4. A. Bejan, "Convection Heat Transfer", John Wiley & Sons, Inc., 1984.

Course results:

After completing the course a student will be able to identify main sources of energy loss in various heat and mass transfer systems, and to perform an elementary quantitative analysis needed for the quality assessment of energy and mass transfer phenomena in various parts of power plant installations.

Grading criteria:

Two problem solution tests during the course (mid-term tests) and a theoretical test at a final exam. All tests must be passed and a final grade is an arithmetic mean of all tests evaluations.

FACULTY OF POWER AND AERONAUTICAL ENGINEERING

WARSAW UNIVERSITY OF TECHNOLOGY

Nowowiejska 24, 00-665 Warsaw, POLAND, Room 125
Phone: (+48) 22 621 5310, (+48) 22 234 7354
Fax/Phone: (+48) 22 625 7351
e-mail: dziekan@meil.pw.edu.pl

Date 19.02.2013

Detailed contents:

Lectures: Fundamental mechanisms of energy transfer. Application of the First and Second Laws of Thermodynamics in the quality assessment of energy transfer phenomena – a review of irreversible processes. Examples of mass transfer in nature and technology. Fundamental concepts and transfer mechanisms of a mixture component. Molecular diffusion and its one –dimensional practical models (plane wall and cylindrical geometry, transient mass diffusion, equimolar counter-diffusion, Stefan flow). Convective mass transfer - forced and natural convection, the boundary layer theory, mass convection empirical relations. Analogy of heat, mass and momentum transfer, Chilton-Colburn analogy and its practical application. Simultaneous heat and mass transfer - examples

Tutorials: Calculations of power losses in selected irreversible processes - such as fluid flow with friction, heat transfer, gas mixing, Joule's effect and combustion occurring in pipes, valves, combustion chambers, heat pumps, internal combustion and turbojet engines. Computation of diffusive and convective mass transfer, using one-dimensional analytical models, empirical relationships and Chilton-Colburn analogy in various processes, such as the waste utilisation, steel carbonizing, humidification and drying of air and other media, NOx propagation in the atmosphere and thermal convection around a body of a complex geometry (calculation of convective heat transfer coefficient).

Additional remarks (by course staff):

Handouts will be provided

	Power engineering	**graduate studies, full time**	**2**

Contents - short:

The objective of this project is to enable students to take their projects from the initial "idea stage" to the final "product and presentation stage." The project gives students an opportunity to demonstrate the knowledge and skills you have already acquired in their engineering studies, by completing a specific engineering project. Students in teams will work on an individual project of a complex nature in order to develop a solution to an engineering problem. In addition to the technical engineering development work, the project may require consideration of issues such as legal aspects, customer specifications, standardisation, cost analysis, and product testing and delivery.

As the use of computers in engineering continues to increase, it is important that engineering students are able to develop intuitive, practical skills through effective use of professional software commonly applied in industry and R&D.

Bibliography:

To be provided by the tutor.

Course results:

The course provides you with opportunities to develop and demonstrate the following learning outcomes. Knowledge and understanding:
• understanding of and ability to apply the relevant knowledge, skills learnt up-to-date in other courses,
• ability to integrate engineering knowledge across traditional boundaries,
• refinement of skills in professional methods of design a specific engineering object aided by commercial software,
• familiarity with principles and conventions of project management and execution.
Cognitive skills:

Phone: (+48) 22 621 5310, (+48) 22 234 7354
Fax/Phone: (+48) 22 625 7351
e-mail: dziekan@meil.pw.edu.pl

Date 19.02.2013

• to gather, analyse, evaluate and use relevant material to complete the project,
• to identify and refine objectives and content for the project within the constraints of a given broad project topic,
• to present the project results and draw well-grounded conclusions based on the evidence assembled.
Key skills:
• to organise yourself and your work appropriately,
• to produce a written report of 4 000-5 000 words on your specialist topic,
• to develop a self-awareness of the skills and activities needed to carry out a project by listing, describing, and practically demonstrating them.
Practical and/or professional skills:
• the course is specifically designed to equip you with the project-related skills which will contribute to your formation and development as a professional engineer.

Grading criteria:
final acceptance of the project

Detailed contents:
The core work in the project is based on a specific commercial software taught and used at the department e.g. FLUENT, ANSYS, MATLAB, SYMULINK, Excel so that students get skilled in using software in projects they may encounter in engineer's practice.
The project is basically team oriented 3-4 person groups are a standard but in special cases individual work is also permissible.
A list of indicative projects will be pre-defined by the tutor but proposal from students are also accepted. The themes should be as much as possible interdisciplinary, combining topics from different research and engineering areas, e.g. innovative materials, thermodynamics, heat transfer, aerodynamics, fluid mechanics, innovation and design, managing complexity, materials failure, robotics, electronics and electrical engineering, solid mechanics and structural integrity, environmental monitoring. The themes should reflect real engineering's tasks from industry.
Throughout of the project course attention will be paid to address properly principles and conventions of project management and execution.
A tutor will advise and guide students, but they are expected to produce their work independently, without close supervision.
Students start their team work with brainstorming their ideas and accessing information through "top-desk research" e.g. from libraries as well as over the internet. After finalizing their design plans, they embark on the main phase of designing, modelling and simulating the design using dedicated software. This is where the real design work takes place, as students apply their CAD skills to their project design.
After completing the design in some cases there would be a phase of building and testing prototypes, but it would be done in the framework of dedicated students' circles.
In the final obligatory stage students shall present their project to other students, faculty and industry representatives. Students will be required to give an oral and a poster presentation as well as a final report on their project.

Cook R. D.: Finite Element Modeling for Stress Analysis, John Wiley & Sons , 1995

Saeed Moaveni: Finite Element Analysis. Theory and Application with ANSYS, Paerson Ed. 2003

Date 19.02.2013

Course results:

After completing the course the students will be able to build simple FE models and will understand the applications and limitations of the method in stress analysis.

Grading criteria:

Assesment based on 2 tests and the results of computer lab (the reports)

Detailed contents:

Lectures: Approximate methods – Finite Element Method, Finite Difference Method, Boundary Element Method. Approximate solutions of 2D Poisson equation. FEM versus Ritz method. Bars, beams, trusses and frames. Basic relations in 2D and 3D stress analysis.Typical algorithms of FEM in static linear stress analysis, popular commercial FE software packages.Accuracy of FE analysis.

Laboratory: Introduction to practical problems of FE modeling in ANSYS, 2D and 3D linear stress analysis, analysis of a simple shell structure.

SYLLABUS

Course name:	**Future Power Technologies**
Course name in other language:	**Perspektywiczne Technologie Energeyczne**
Short name:	**FPT**
Course number:	**ML.ANS535**
Course language:	**English**
Responsible for the course:	**prof. dr hab. inż. Andrzej Miller**

ECTS:	**2**	Number of hours:	[Lc, T, Lb, P, S]
Course level:	**basic**	weekly:	[**2,** 0, 0, 0, 0]
Form of grading:	**Continous assesment**	by semester:	[**30,** 0, 0, 0, 0]

Field of Study:	Field of Specialization:	Study level:	Recommended semester:
Energetyka	**Power Engineering**	**graduate studies, full time**	**2**
	Power engineering	**graduate studies, full time**	**2**

Contents - short:

Review of future power technologies

Course results:

Basic knowledge about possible ways of future development of power engineering

Grading criteria:

Final test

Detailed contents:

Advanced power engineering system for central and distributed generation and supply of energy. Ultra supercritical parameters for steam systems gas-steam sets, coal gasification, fluidized bed combustion, fuel cells, hybrid systems and others

Additional remarks (by course staff):

All course info available on http://energetyka.itc.pw.edu.pl

Contents - short:

Solution of a given problem and the elaboration of a short report on the subject of performed work.

Bibliography:

Books and textbooks, scientific journals, the Internet.

Course results:

Gaining the ability: to solve problems, perform selection of relevant literature, choosing research methods, presentation of obtained results and its critical analysis.

Grading criteria:

Evaluation criteria: problem statement, literature overview, problem solution and its written presentation.

Detailed contents:

Detailed contents depend on the topic and the nature of work (design-prototyping, computational, experimental).

Additional remarks (by course staff):

The scope of work is terms to consultation between the student and his individual supervisor. The topic must be consistent with study programme and specialisation.

Contents - short:

Gaining skills of information gathering and its critical analysis; learning presentation skills.

Bibliography:

Books, textbooks, scientific journals, the Internet

Course results:

Gaining the ability of information gathering, and performing its critical assessment (especially concerning information obtained from the Internet). Learning how to prepare short and concise presentations and how to present in limited time. Learning how to defend a thesis in front of an audience.

Grading criteria:

The elements that are subject to evaluation include: the quality of collected information, quality of elaborated analysis, especially the critical discussion of collected data, and quality of the given presentation. It is recommended that the presentation is conducted during a student group meeting, and the students should contribute to its evaluation.

Detailed contents:

It is recommended that the subject is completed in two steps:

Date 19.02.2013

1. Collecting materials on the given subject with the aid of all available information sources: including books, textbooks, journals and the Internet. The collected material must be analysed and summarised in the form of a short report containing references to the literature sources used. This part should be conducted under the supervision of the advisor and its progress must be controlled during individual meetings. An important part of this stage is a critical analysis of the collected material and its relation to the knowledge gained during studies. It is required to use both domestic and international source materials.

2. Work presentation. Results presentation must be performed in front of a bigger audience during a student group seminar. Each of the students will be given 10-15 minutes of presentation time, followed with questions stated by the seminar participants. This stage is considered preparation to the upcoming thesis defense.

Additional remarks (by course staff):

The seminar should be prepared under the supervision of a scientific supervisor. It must follow the diploma thesis themes. The seminar should match the area of studies programme and specialisation.

Contents - short:

Synthesis of engineering knowledge acquired during first and second degree studies. Gaining the ability of solving the given problem and preparing the report.

Bibliography:

Books, textbooks, scientific journals, the Internet

Course results:

Gaining the ability: - to solve the research problem , - perform selection of relevant literature, - choosing research methods, - presentation of obtained results and its critical analysis.
Detailed specification depend on the topic of work.

Grading criteria:

The promoter and reviewer verify the realisation of task given to the student, they fill out the thesis assessment forms. With positive evaluation the student is permitted to diploma defence, the final grade is decided by the commission.

Detailed contents:

Detailed contents depend on the topic and the nature of work (design-prototyping, computational, experimental).

Additional remarks (by course staff):

The scope of diploma work is terms to consultation between the student and his individual supervisor. The topic must be consistent with study programme and specialisation

The elaborated thesis report is evaluated. The student is permitted to attend the diploma exam (and the diploma defence) if he/she completed the required study programme and the other requirements specified in study regulations are fulfilled.

Date 19.02.2013

SYLLABUS

Course name:	**Numerical Methods in Heat Transfer**
Course name in other language:	**Metody Numeryczne w Wymianie Ciepła**
Short name:	**NMHT**
Course number:	**ML.ANK347**
Course language:	**English**
Responsible for the course:	**prof. dr hab. inż. Jerzy Banaszek**

ECTS:	**3**	Number of hours:	[Lc, T, Lb, P, S]
Course level:	**basic**	weekly:	[**2,** 0, **1,** 0, 0]
Form of grading:	**Continous assesment**	by semester:	[**30,** 0, **15,** 0, 0]

Field of Study:	Field of Specialization:	Study level:	Recommended semester:
Energetyka	**Nuclear Power Engineering**	**graduate studies, full time**	**1**
	Power Engineering	**graduate studies, full time**	**1**
	Power engineering	**graduate studies, full time**	**1**

Prerequisits:

Fluid Mechanics 1 (ML.ANW122) , Heat Transfer 1 (ML.ANK423) , Partial Differential Equations (ML.ANK481)

Contents - short:

Fundamental knowledge of contemporary computer simulation techniques in fluid mechanics and heat transfer (such as control volume method and finite element method) and training in application of these methods to engineering problems (with the use of selected commercial codes, such as Ansys Fluent and/ or Fidap)

Bibliography:

1. C. Hirsch, „Numerical computation of internal and external flows", second edition, John Wiley & Sons, Chichester, 2007.
2. S.V. Patankar, „Numerical heat transfer and fluid flow", Mc Graw-Hill, 1980.
3. H.K. Versteeg and W. Malalasekera, „An introduction to computational fluid dynamics. The finite volume method", second edition, Pearson Prentice House, London, 2007.
4. O.C. Zienkiewicz, R.L. Taylor and P. Nithiarasu, „The Finite element method for fluid dynamics, sixth edition", Elsevier, Amsterdam, 2005.
5. R.W.Lewis and
6. Y. Yaluria and K.E. Torrance „Computational Heat Transfer", Hemisphere, 1986

Course results:

After completing the course a student:

FACULTY OF POWER AND AERONAUTICAL ENGINEERING
WARSAW UNIVERSITY OF TECHNOLOGY

Nowowiejska 24, 00-665 Warsaw, POLAND, Room 125
Phone: (+48) 22 621 5310, (+48) 22 234 7354
Fax/Phone: (+48) 22 625 7351
e-mail: dziekan@meil.pw.edu.pl

Date 19.02.2013

• will be able to understand underlying assumptions, basic methodology and limitations of all consecutive stages of computer modelling of a real engineering problem;
• will be familiarized with all details of FEM and CVFDM simulation of heat transfer and fluid flow problems, and, in particular, with major difficulties encounter in such modelling of both: a pure molecular diffusion (e.g. in composite materials) and convection (e.g. wiggles, cross-wind diffusion, numerical dispersion), as well as with special techniques of numerical errors elimination or reduction (e.g. up-winding, staggered grid approach, un-equal order FEM, grid refinement);
• will be able to use and modify, for his/her particular engineering problem to be solved (e.g. through the User Defined Functions), commercial codes applied for both: grid generation and calculations;
• will be able to correctly interpret obtained numerical results, in particular, to distinguish between potential numerical inaccuracies an specific features of the analysed physics.

Grading criteria:
An assessment consists of two parts: (1) a final theoretical test of the knowledge acquired during lectures; (2) a practical test in the lab.
A final grade comprises 60% of the theoretical test grade and 40% of the laboratory test evaluation.

Detailed contents:
Lecture:
1. From reality to its computer simulation - successive stages of a model development.
2. Mathematical model of incompressible fluid flow and heat transfer – integral and differential conservation equations.
3. Methods of a geometrical domain discretization.
4. Review of contemporary numerical methods in heat transfer and fluid flow – Control Volume Finite Difference Method (CVFDM), Finite Element Method (FEM).
5. Solving steady-state and transient diffusion on control volume and finite element grids.
6. Special numerical techniques for convective-diffusive transport – upwind schemes in CVFDM and FEM.
7. Error analysis of computer simulation – consistence, stability, convergence, accuracy estimation on a grid of a moderate density.
8. Review of effective computational algorithms in CVFDM and FEM modelling of incompressible fluid convection.
9. Solution methods for linear algebraic equations – a review.
10. Introduction to turbulence modelling.
11. Credibility of a computer simulation – verification and validation, examples of credibility assessment.
Computer Lab:
1. Introduction to ANSYS Gambit – step-by-step division of 2D complex domain into control-volumes, structural and non-structural grids, types of domain and boundary conditions, application of advanced functions in a local mesh refinement.
2. Introduction to ANSYS Fluent – mesh diagnostics, boundary and initial conditions, material properties, solver settings, graphical post processing, User Defined Files. 3. Examples of modelling with the code Fluent: 3D natural thermal and/or solutal convection, thermal radiation, convection in porous media, and/or heat transfer in a turbine blade.

Additional remarks (by course staff):
handouts will be provided.

	Power Engineering	**graduate studies, full time**	**2**
	Power engineering	**graduate studies, full time**	**2**

Contents - short:

The course contains basics of relativity and wave optics.

Course results:

After completing his course the students will understand the basics of the relativity and the optics. This knowledge gives them possibility to project simple optics components and units.

Grading criteria:

The final written exam will be cumulative over all material covered during the semester. (grade: 100% exam)

Detailed contents:

RELATIVITY
Time Dilatation
Length Contraction
The Lorentz Transformation
Relativistic Energy and Momentum
OPTICS
Review of Electricity and Magnetism (Gauss' Law, Ampère's Law, Faraday's Law, Maxwell's Equations, The Wave Equation)
Plane Waves in Isotropic Media
Energy Flux (Energy Flux, Intensity)
Polarized Light (The Wave Equation as an Eigenvalue Problem, The Polarization Ellipse, Linear Polarization, Circular Polarization)

SYLLABUS

Course name:	**Project Management**
Course name in other language:	**Kierowanie projektami**
Short name:	**PROJMAN**
Course number:	**ML.ANK445**
Course language:	**English**
Responsible for the course:	**dr inż. Wojciech Bujalski**

ECTS:	**2**	Number of hours:	[Lc, T, Lb, P, S]
Course level:	**basic**	weekly:	[**2,** 0, 0, 0, 0]
Form of grading:	**Continous assesment**	by semester:	[**30,** 0, 0, 0, 0]

Field of Study:	Field of Specialization:	Study level:	Recommended semester:
Energetyka	**Nuclear Power Engineering**	**graduate studies, full time**	**3**
	Power Engineering	**graduate studies, full time**	**3**
	Power engineering	**graduate studies, full time**	**3**

Contents - short:

Getting to know the basics of planning and preparation of investment and project management. Presentation of Project management techniques.

Bibliography:

The materials on the website http://materialy.itc.pw.edu.pl/zmue/bujalski/project_management/
PIM

Course results:

After completion of the course, students should know the basics of terminology and principles of project management. He should be able prepare your own project in accordance with the methodology of project management

Grading criteria:

Final qualifying test, and attendance

Detailed contents:

General principles of project management
Project Phases
Exercises for the preparation of your sample project
Risk management - the basics
General principles of organization of construction site
Basics of economic issues in project management

	Power Engineering	**graduate studies, full time**	**2**
	Power engineering	**graduate studies, full time**	**2**

Prerequisits:

Thermodynamics 1 (ML.ANW116) , Thermodynamics 3 (ML.ANK413)

Contents - short:

Knowledge of link between microscopic, statistical phenomena and macroscopic behaviour of materials. Knowledge of cross-effects and their applications

Bibliography:

1) T.L. Hill: "An Introduction to Statistical Thermodynamics",
2) A. Bejan: "Advanced Engineering Thermodynamics", John Wiley & Sons, Inc.
3) D.V. Ragone: "Thermodynamics of Materials", John Wiley & Sons, Inc.
4) Materials for students placed on website

Course results:

After completing his course the students will be able to understand meaning of the macroscopic properties and specify processes occurring close and far from thermodynamic equilibrium.

Grading criteria:

solution of two complex problems in statistical and non-equilibrium thermodynamics

Detailed contents:

Lecture:
1. Fundamentals of kinetic theory of gases and transport theory.
2. Boltzmann equation.

e-mail: dziekan@meil.pw.edu.pl

Date 19.02.2013

3. Microstate and macrostate.

4. Classical and quantum statistics. Partition function.

5. Statistical interpretation of thermodynamic functions.

6. Local formulation of the 2nd Law of Thermodynamics.

7. Postulates of the linear non-equilibium thermodynamics. Generalized forces and fluxes.

8. Onsager's and Curie's principles. Properties of stationary states. Cross-effects.

9. Thermo-diffusion and Dufour effect. Non-equilibrium phase transitions. Wilson line.

Tutorials:

1. Examples of electro-kinetic applications.

2. Examples of thermoelectric applications,

3. Examples of thermionic applications. and thermo-electromagnetic applications.
